This attack on Microsoft has gone on much too long, it has turned into blackmail, or terrorism. We all know that one way to win is to keep your opponent in court until he's broke and has to confess, agree, or give the company to his tormentors. We are fighting a war all over the world to stop terrorism and yet our own government practises it on Americans. Not only that, we allow Activist of every sort to blackmail their victims by using terrorist methods. An example is the fur industry and the timber industry. Is not the government a government of all the people or is it just the government of activist. If its just for activist then we must have already become socialist with an axe to grind. We must remove temptation from activist judges, politicians and socialist by getting back to our written law called the Constitution. It is not a living document and it allowed for change by Congress and the States. Lets quit letting slick lawyers, the Supreme Court, the news media and politicians change it by declaring it changed.
